The effective self adherent dressing for scar reduction

- Minimises pain and trauma at dressing changes\(^1,2,3\)
- No extra fixation is needed
- Conforms well to body contours
- Can be worn in daily activities

**Safetac® layer**
- Patented soft silicone adhesive technology
- Reduces pain and trauma on removal\(^1\)

**Nonwoven backing film**
- Breathable
- Water proof

**Safetac® technology. Less pain and less trauma.**
Safetac is a patented adhesive technology that minimises pain to patients and trauma to wounds. Safetac technology is available exclusively on Mölnlycke Health Care dressings, including Mepilex®, wound care dressings, Mepitel®, Mepiform® and Mepitac®.

For more information visit [www.safetac.com](http://www.safetac.com)
How to use Mepiform®

Remove the release film. If needed, cut to shape. Apply Mepiform to the scar. Make sure the skin is clean and dry and free from any ointment etc. Reapply after daily cleaning of the scar.

How Mepiform works

Topical silicone has empirically been shown to have positive impact on hypertrophic scars and keloids.4,5 It may take from 3 months up to a year or more to improve an old scar, depending on the condition of the scar tissue. Mepiform shall optimally be worn 24 hours a day. It is recommended that Mepiform is removed once a day, e.g. when showering or bathing, for inspection and washing of the skin. For prophylactic treatment, Mepiform shall be used for 2–6 months depending on the condition of the scar.

Benefits of Mepiform

- Minimises pain and trauma at dressing changes
- No extra fixation is needed
- Mepiform is thin, flexible and discreet
- Can be worn in daily activities
- Can be reapplied
- One Mepiform product can be used for several days

Areas of use

Mepiform is designed for the management of old and new hypertrophic scars, keloids and closed wounds which may prevent the formation of hypertrophic and keloids scars.

Note

Should maceration or rash occur, allow the skin to rest until the symptom has disappeared. Continue treatment and gradually increase the treatment time per day. Mepiform has an ultraviolet protection factor equivalent to 7.7.6
